Painted Dial Clocks 1770-1870

Brian Loomes : Painted Dial Clocks 1770-1870 before purchasing it in order to gage whether or not it would be worth my time, and all praised Painted Dial Clocks 1770-1870:

This text includes a detailed list of every recorded dialmaker and explains in non-technical detail the development of dial and case styles and regional trends. It should be suitable reading for the owner of any painted dial clock, as well as collectors and dealers. This is a re-write of the author's earlier book "White Dial Clocks". This new edition, written to take account of the latest research findings, contains additional black and white illustrations and new colour material.

The painted dial type of clock is important to the collector or student in Britain in the sense that it is more readily available than many other types of clock. This greater availability often also means that painted dial clocks fall into a lower price category and so are more affordable for the potential buyer. For the collector or student in America, these clocks assume an even greater importance. Of those clocks actually made in North America few were made with brass

dials, and those with painted dials were often made using dials imported from Britain by the clockmakers. The same also applies to clocks made in Canada, Australia and New Zealand. For all these countries, therefore, a knowledge of British painted dial clockmaking is useful.
